

Hello! Thanks for buying this template.

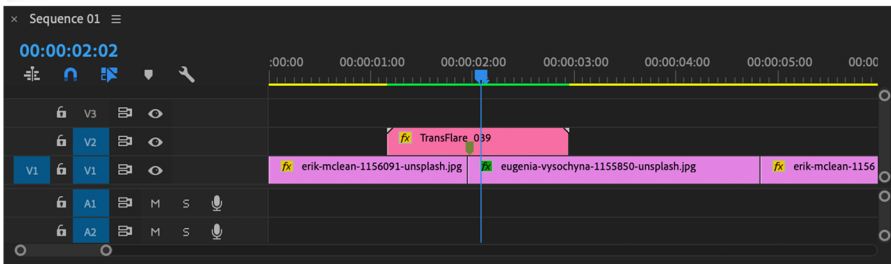

1. Open Premiere Pro and titles will appear at your Essential Graphics panel

(if you do not have this panel, you can enable it at menu "Window" -> "Essential Graphics")

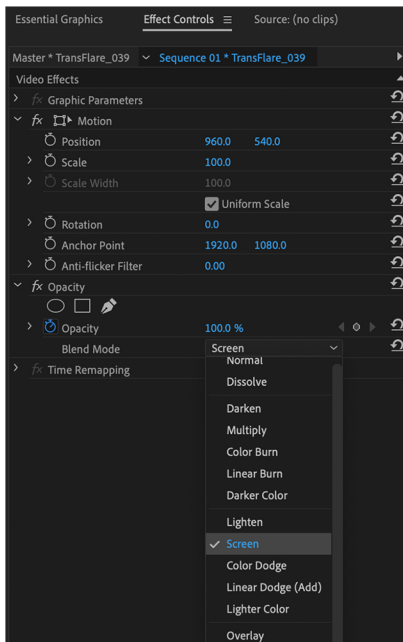

To separate these transitions from any others, just type in "TransFlare" at the search.

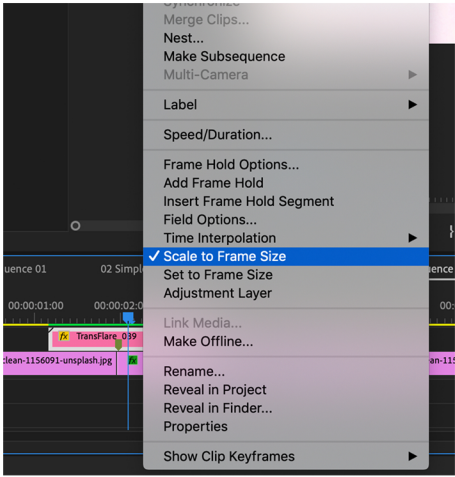

2. Drag a TransFlare layer onto your images at any point and move them easily. Wherever you put the layers, it will affect all the clips below.

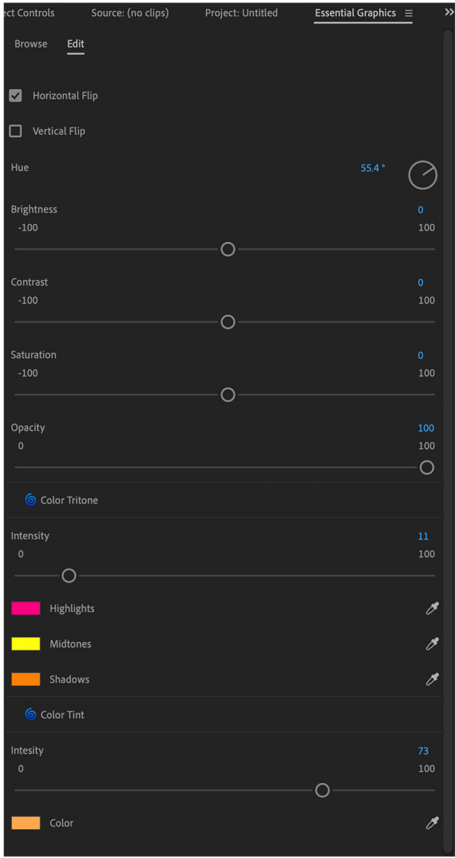

3. Select the transition, now in the Effects Control tab click Blend Mode and select the Screen option. (If you prefer, choose another option for a different effect.)

4. The transitions are with resolution 4k (3840x2160). If your project is with a smaller resolution, Select the **Scale to Frame Size** option to fit the correct size.

5. Use parameters at “Edit” tab to customize them:

1. Adobe After Effects (IMPORTANT - Latest version that supports Essential panel)
2. Adobe Premiere Pro (IMPORTANT - Latest version that supports Essential panel)

SUPPORT

If you have any questions about this project or need customization and support please contact us.
We love hearing from you!
